American Association of Chinese Studies
Annual Meeting Program 2019

2019 marks the centennial of the May 4th Movement, whose effects on the future development of the Sinitic world can hardly be overstated. While best remembered for its influence on modernization and nationalism, the May 4th Movement also had far-reaching effects on the Sinicization of Marxism, Confucian ideology, literature and film, constitutional development, and even Buddhism. This year's meeting of the American Association of Chinese Studies, our 61st, seems a fitting time to re-examine the legacy of the May Fourth Movement from the perspective of a century. Six panels have been organized around this theme. The AACS is grateful for the Chiang Ching-kuo Foundation for Scholarly Exchange to fund the panelists in these panels.

At the same time, cognizant of the many other important events that have decennial anniversaries, including most notably the founding of the People's Republic of China in 1949, the disastrous demise of the Great Leap Forward of 1959, the Taiwan Relations Act of 1979 and the Tiananmen uprising in 1989, other panelists will examine their effects from the vantage points of their respective academic specializations.

We are grateful to the administration and staff of the University of Washington for hosting the conference, and to our keynote speakers, world-renowned authority on Chinese and Taiwanese film Professor Stan Rosen of the University of Southern California and Dr. Hank Huang President of Taiwan Academy of Banking and Finance for sharing their insights on China's economic conditions with us.

The Chinese model of finance: from the 2018 crisis to deleveraging and beyond

Summary: China's reform and opening allowed it to become reintegrated into the global economy. In particular, the introduction of market mechanisms following its induction into the WTO modernized its entire political and economic system, helping it move away from the previous dictatorship of the Communist proletariat. Since this time, the objectives of maintaining the socialist struggle against the bourgeoisie while simultaneously joining the global economy, embracing private ownership and the market economy to maintain steady growth and prevent the fate of the former USSR, have become persistent challenges.

This paper will explore each stage of China's economic development, including the role of world factory after entering WTO and the global economy rescuer with her four-trillion-yuan investment package in the financial crisis in 2008. It will discuss the results and influence of fiscal and monetary of China's government, in particular analyzing the causes of liquidity crises that occurred from 2013-14, and the government's response, elucidating China's differences with market democracies. Finally, it will also analyze China's thinking and possible future developments following the trade war in 2018. Although the top-down design concept can efficiently form a consensus on ideological issues, the Party still lacks a clear direction in response to the Sino-US trade war. If China is unable or unwilling to reform its institutions, it will face severe challenges to further growth.

China's Use of Film to Promote Soft Power in the Era of Xi Jinping and Donald Trump
Summary: Almost a decade ago a Chinese “Blue Book (*lanpishu*)” on soft power noted pessimistically that the United States held 43% of the soft power in the world while the European Union accounted for 34%. Excluding Japan and Australia, China and the rest of Asia was limited to less than 4%. Two years into the presidency of Donald Trump, the evidence of the decline in the American image internationally from multiple surveys is overwhelming. Has China been able to reap the rewards from the American decline and, if so, are China's gains sustainable?

One area China has targeted is its film industry, seeking to compete with Hollywood not only domestically, where they've done well, but also globally. However, China faces serious obstacles, some of which derive from a flawed concept and its measurement, as well as structural factors that have prevented any nation's film industry from competing with Hollywood. But China's own contradictory priorities and its self-imposed constraints also share responsibility. Despite yearly spending of over 10 billion USD on soft power, China has repeatedly been willing to sacrifice potential gains in soft power in pursuit of higher priorities. In China's hierarchy of values, *influencing* the behavior of other countries – and punishing them for “anti-China policies” -- has taken precedence. In addition, Chinese soft power is focused more on the domestic audience since political and social stability at home are China's paramount values. This in turn requires state control of civil society. Unlike American soft power, which has been most successful when it is separated from government – e.g., Hollywood films – Chinese soft power has not only been inseparable from government initiatives but, in the case of the film industry, these initiatives - e.g., censorship - have often been taken with no explanation, leading to a further erosion of soft power.
